

## Computer Requirements for Tiger Auto Dialer & Koala Quick Call

To operate a Tiger or Koala dialer using VoIP, you will need the following:

### 1) Desktop or Laptop computer with either Windows XP or Vista or 7.

**Minimum System Requirements:** 1 GHZ processor, 512 MB of RAM, 10 MB of available hard drive space, Super VGA Monitor, Keyboard, Mouse, Sound Card, and available USB port. Important Note: If you will be importing large lists of telephone numbers, you may need a faster processor, more RAM, and more hard drive space. The computer must be **dedicated** to the dialer while it is dialing, without any interference from other uses.

### 2) High speed (broadband) internet connection.

**Requirement Details:** Each user will need at least 90 kbps upload and download bandwidth on a high speed internet connection. The internet connection must be of consistent high quality throughout the dialing time.

**Important Internet Connection Notes:** 1) The Power Seller does not work well with dial-up internet or with satellite internet. 2) When using Skype or other VoIP services, uploading and downloading files may interfere with the voice quality unless you have adequate bandwidth. 3) **Norton** and **McAfee** anti-virus software may block your Skype or other VoIP connection. We recommend using **AVG** anti-virus software. It is free and can be downloaded here: <http://free.avg.com/>

**We Sell New Computers: \$595 each**

Includes Desktop PC, Windows 7 Home Premium, Keyboard, Mouse, (no monitor)  
2.2 GHz (or faster) Processor, 2 GB RAM, 160 GB HDD, DVD-RW
